EXPERIENCES

Fullstack Software Engineer – AI Solutions, Home Office

August 2022 - Current Moment

I am an active developer who is engaged in the development of software for evaluating public servants, providing an electronic posting service for public acts, and auditing and controlling public accounts of several Brazilian states. I hold a central position in the development team and am fully responsible for the evaluation and control systems of the official gazettes of some states in Brazil.

My work is of utmost importance as the data I build is used in our artificial intelligence system, which aims to map the updating of public resources in the states. This information serves a significant purpose and can be utilized by the regulatory body as a valuable tool in combating corruption and managing public accounts.

As a key developer on projects, I play an essential role in assisting team members and developing solutions across various programming environments, with a special focus on PHP, which is the predominant technology today. Additionally, I also work on legacy software while performing maintenance on new software created by myself using recent technologies.

EDUCATION

University – Federal Institute of Mato Grosso do Sul (IFMS) – Três Lagoas Campus — *Partial*

August 2021 - Current Moment

I am currently studying Systems Analysis and Development at IFMS. I am in my second year and plan to graduate in two years. During the course, I am reviewing and practicing concepts that I had already learned in my technical course and at work, such as algorithms, databases, and programming. After completing my undergraduate studies, I plan to pursue postgraduate studies.

Computer Technician – Federal Institute of Mato Grosso do Sul (IFMS) – Três Lagoas Campus — *Completed*

April 2016 - July 2019

I completed high school with excellence at the Federal Institute of Mato Grosso do Sul, on the Três Lagoas campus. In the middle of the course, I developed my skills in the area of computing and communication between teams. I also participated in various activities in favor of IT, such as courses, lectures, events, business incubators, internships and course completion work.

FullStack Developer – Hyperlocal, Home Office

December 2021 - August 2022

As a programmer, I had the opportunity to lead the development and maintenance of several services for Hyperlocal software aimed at CrossFit Boxes. In this role, I worked with a variety of technologies, both recent and legacy, to ensure seamless integration and efficient operation of all system components. When facing technical challenges, I participated in integrations with external services and third-party APIs, contributing to the functional expansion and continuous improvement of the software.

Additionally, I was responsible for maintaining smaller industry-specific software, such as the CrossFit championship management system. This broad and diverse experience has allowed me to not only hone my skills in emerging technologies but also assert my ability to manage and maintain existing solutions, ensuring the delivery of unique results in industry-specific hyperlocal environments.

FullStack Developer – The Brooklyn Brothers, Home Office

September 2021 - December 2021

During my tenure at The Brooklyn Brothers, I played a pivotal role in developing CRM management software for a foreign company. Leveraging my extensive development experience, I focused on creating efficient and innovative solutions. My expertise in Laravel Nova, a robust private framework, enabled me to develop a personalized and agile system that precisely met the client's requirements.

Throughout this challenging project, I applied my knowledge of Laravel Nova to create an intuitive and functional interface, facilitating effective customer relationship management. My commitment to quality and efficiency ensured that the software not only met technical requirements but also provided an exceptional user experience. My time at The Brooklyn Brothers was marked by the success of delivering this project, highlighting my ability to tackle complex challenges and deliver high-quality solutions.

Backend Developer

I am a versatile developer with solid skills across different technologies. In the context of web development, I specialize in Laravel to create robust and efficient applications. Additionally, I have extensive experience in Node.js, providing scalable and high-performance solutions. In the Python ecosystem, I specialize in Django, where I develop powerful web applications with a focus on modularity, and Flask, for lighter and more agile projects. My approach is centered around efficiency and I constantly update myself with industry best practices to ensure innovative results in every project I undertake.

Frontend Developer

I have extensive experience in developing modern user interfaces, with a focus on frontend technologies such as React, Next.js, and Vue. My proficiency in React allows me to create reusable components and build interactive and dynamic interfaces. I also have experience with Next.js, which enables me to provide server-side rendering and optimization solutions for better performance. In Vue, I can develop elegant and responsive interfaces, taking full advantage of the flexibility of this framework. My user-centric approach and constant search for innovation ensure that my frontend solutions meet the highest standards of quality and usability.

Other areas

✅ **Docker Infrastructure;**
✅ **Git;**
✅ **Cache;**
✅ **CI/CD and Tests;**
✅ **SQL, ORMs and NoSQL;**
✅ **API Consumer;**

Backend Developer - SoftExpert Software, Joinville — *Framework Developer*

February 2020 - August 2021

During my time at SoftExpert, I was responsible for developing the company's primary PHP frameworks. I worked on various projects, ranging from a legacy framework to a modern framework that incorporated the latest industry best practices.

As a result, I gained experience in dealing with different types of problems and responsibilities, and my role was critical to the company's success. In addition to my primary responsibilities, I occasionally worked on other projects, such as client access and frameworks in other programming languages.

Full Stack Developer - Freelancer at multiple platforms, my personal office — *Full Stack development*

July 2019 - Current Moment

I work on several projects on various platforms like 99freelas and freelancer.com. I worked with various technologies in different sectors such as front-end, back-end, deploy, scripts and web crawler.

Internship - Unidas serviços, Três Lagoas — *Help Desk*

August 2018 - January 2019

The aim of the internship at the company was to complete one of the stages of training at IFMS. During my time there, I provided help desk and basic programming services.

AWARDS

1. **4th at FESTIVAL,** winning a trip to demonstrate my project: Millennium.
2. **An outstanding student in 2014,** I received incentives from the government with a tablet and a medal.

GIT PROGRESS AND PROJECTS

I'm focused on developing my programming skills, so I'm always participating in new projects, as you can see on my GitHub
